Funding for this initiative was made possible (in part) by Providers' Clinical Support System for Medication Assisted Treatment (5U79TI024697) from SAMHSA. The views expressed in written conference materials or publications and by speakers and moderators do not necessarily reflect the official policies of the Department of Health and Human Services; nor does mention of trade names, commercial practices, or organizations imply endorsement by the U.S. Government.

\*This training, in conjunction with a 3.75 hour online study and exam, will provide the required 8 hours needed to obtain the waiver to prescribe buprenorphine in the office-based setting for opioid use disorders. The first half of the training is a 4.25- hour live session. The second half of the course is a 3.75-hour computer-based study. An examination on the computer study must be successfully completed within 30 days of the live training session as part of the process to obtain a waiver for prescribing buprenorphine. Instructions on how to log on to the second half of the course will be provided via email ONLY to those who complete the live session in its entirety. Please note that in order to be eligible for the waiver to prescribe Buprenorphine, you must complete a total of 8 hours consisting of the live session (4.25 hours) and the online self-study session and exam (3.75 hours - within 30 days of the live training). The AOAAM cannot verify completion of the live session if less than 4.25 hours are attended.
